

## **PEDAGOGICAL FORMATION OF SOCIAL ACTIVITY IN STUDENT-YOUTH**

**Doniyorjon Muydinov**

*Lecturer, Fergana State University, Uzbekistan, Fergana city*

### **ANNOTATION**

*It is known that human activity is closely related to the concepts of action, activity, behavior and goes back to the issue of the individual and his consciousness. The personality is formed precisely in the process of various activities, manifests itself. Social activism influences the concentration of thoughts, feelings and actions of people in any area of social reality to assess the life of society and, on this basis, change the relevant aspects of social reality. From the above points, one can say that "social activity" is a criterion that indicates the level of awareness, perfection of an individual from each area. Striving for social faoism is itself an idea.*

**KEYWORDS:** *society, state, civil society, harmonious generation, youth policy, citizen, activity, social activity, tolerance, adaptation.*

### **INTRODUCTION**

In the process of reforming the development of a new society in Uzbekistan, it is important to study the theoretical and practical aspects and experiences of the creation of the foundations of civil society in different countries of the world at different levels and periods. Civil society is a certain social system that guarantees every citizen of this country full freedom to build his economic and political life at his own discretion. Civil society is formed in harmony with the increase in self – awareness of people, their ability to feel a sense of responsibility in the object.

Globalization is the process of increasing interconnection between different countries and regions of the world. The convergence of countries of the world in the socio-economic, political and cultural spheres, the integration of events into one country on the universal scale. It is no wonder now that a lot of money is spent on processing information, delivering it to a designated space, and being the first to deliver it. After all, young people have a perception that it is always right to provide information. This will allow them to disseminate any information they want from their own interests.

Promoting research and innovation in our country, creating effective mechanisms for the implementation of scientific and innovation achievements in a global ethical culture in the image of a global-minded future person: - the formation of such important qualities and qualities as self-education, self-improvement. At the same time, it envisages significant changes in the global community from the principles of ethical culture and the traditional way of life to the modernization of young people. It is important for the individual to feel the importance of individual, self-awareness and self-organization qualities and abilities, worldview and cultural breadth and openness and tolerance, especially for young people. Promoting research and innovation, creating effective mechanisms for the implementation of scientific and innovation achievements occurs when the youth abandons life, cultural and behavioral stereotypes that keep them engaged in professional, political and social progressive processes.

### **MAIN PART**

The real economic facilities and opportunities of society created for a person, legal rights, a settled moral and spiritual environment should be harmonized with the fact that his thinking pursues free, progressive and high ideals. According to our scientists, the approach of young people to social reality on the basis of a new, independent and free thinking has a high performance. Meanwhile, from the point of view of psychologists and sociologists, the development of a newly formed civil society in many ways requires a correction of the consciousness, character and worldview of young people. By now, civil society in our country, the need and responsibility for deciding on a monand system of Public Administration – democracy-has taken the task of further shaping the high spiritual potential of each younger generation, the philosophical way of thinking. In fact, it is necessary for a person to put everything on the scales of reason before solving the tasks in front of him, to predict from the very beginning the likely results of the practical steps he will take. Education plays an incomparable role in elevating youth social culture.

The current stage of development of society and the state requires that scientific and innovative ideas comprehensively increase the overall literacy of the participants in the relationship. To date, the harmonization of education has become an important task. Because, if education is separated from education, that is, to educate young people, and lag behind in applying this

knowledge, values such as patriotism, responsibility to parents and mahallas will be neglected. That is why we should never forget that encouraging research and innovation, creating effective mechanisms for implementing scientific and innovation achievements requires a great responsibility of young people.

In the study of the content of this article, it is necessary to know the content of the totals of society, civil society, social activity. Between the concept of society and the concept of "civil society", there are not only inseparable, but also very serious differences. The society, which is considered a set of relations between people, becomes a civil society at a stage when its development is in improve, under certain conditions. The category of civil society represents a qualitatively new situation from the point of view of the structure of society and self-government, manifests the alternative of the interests of the state and the individual. In this person, his rights and freedoms are manifested as a supreme value.

Society is a collection of associations in which all methods of mutual action of people and their interdependence on each other are expressed[1].

The concept of civil society has been manifested in a variety of manifestations over a long period of time, from antiquity to Western enlightenment.

Civil society is a social space in which citizens are provided with active participation in the management of the state and society through relevant civil institutions[2]. The concept of "civil society" is a product of the mentality that mankind has formed for several centuries, and it has been manifested as a criterion of how high the level of provision of human rights and freedoms is. In general, the term "civil society" has a common essence in various foreign literature, but at the same time it is a concept that harmonizes the national traditions of each country.

Social activity in civil society expresses the level of conscious, unselfish analysis of social relations and their desire to change those elements.

Social activity is the participation of social subjects (society, strata, groups and individuals) in socio-political processes, the influence of Labor and cultural and educational activity, the pursuit of full implementation of the rights and duties set forth in the law. Social activity is the main condition for a person to find his place in society and consciously manage his behavior[3].

Civil culture is the conscientious fulfillment of duties and obligations of an individual as an active member of society, along with the possession of certain rights. Formation of social culture in young people - on the basis of giving them knowledge about the features of the structure of an independent state, the role of the country in the international arena, feelings of patriotism and interethnic friendship, social actions carried out on the path of developing the economy of our republic, labor traditions, the idea of national independence and the foundations of ideology, responsibility for fulfilling duties and obligations, it is considered a holistic upbringing process that embodies qualities such as social activity and dedication[4]. Civil society institutions-the strengthening and development of self-governing bodies, non-governmental and public organizations is one of the important conditions for increasing the political and social culture, activity of young people[5].

There are three types of social activity: in the sphere of socio-political processes and culture, labor and living. Labor activity is manifested in the field of labor relations and arises in connection with the professional-social task of the subject. It is recognized as the main, defining type of social activity. Its forms include: austerity, effort for superintendency, participation in scientific and technical creativity, rationalization, ingenuity and other actions. Socio-political processes and activity in the sphere of culture and life are manifested in the socio-political, cultural and educational processes of the individual, in his personal life.

In the event that a person has faced any serious problems of social importance and understands that it is necessary to adopt new laws or to improve the existing laws in order to solve them, the pursuit of social activity becomes more difficult. Social activity of members of society can manifest itself in various forms. By the nature of its manifestation, it is divided into constructive and destructive types. Constructive social activity is the social system in which members of society have these contradictions in conflict with certain contradictions. Seeks to eliminate using legitimate legal programs. It establishes public associations to express its interests, solve problems on the basis of existing laws.

In order to expand the knowledge and worldview of young people, actively support talented students, a number of competitions and sports competitions are regularly held in higher education institutions. All this work is being organized within the framework of the existing systems and mechanisms that have been formed so far[6]. Moreover, the work in the spiritual and educational sphere has not lost its importance in terms of efficiency, influence, modernity.

Nevertheless, in today's age of globalization and rapid information, the role of social networks and the media in the management of the state and society has been sharply activated due to freedom of speech in harmony with the democratic reforms in our country. In such a circuit, the need arose to take the work on the education of young people to a new level. Of course, to work in such a complex situation, to achieve the result, first of all, conditions and highly qualified personnel are needed[7].

The content of social activity, which can be defined as destruktiv, is different. Such activity is directed against the existing social system, manifested in the desire to destroy it. It arises in a situation where it is believed that with the existing legal programs it is impossible to achieve its goal, solve problems of social significance. In such cases, social activity will not have clear legal limits. And this can lead to a sharpening of the social situation. This type of social activity is observed in periods of instability in social relations.

In the process of increasing social activity, one should pay attention to the formation of the following social qualities:

1. Science. An educated person is considered to have a lot of knowledge. When you say truly educated, it is said to a person who understands the literal meaning and meaning of things and phenomena, knowing the laws that make up them, passing through their own thinking, testing them in life several times, turning them into skills and abilities. The more knowledge a person has in himself, the more educated he is.

2. National pride is a social quality that serves as an incentive to any process of activity of mankind. A healthy national pride dictates respect for people of other nationalities.

3. Patriotism is a civilized view of national pride, one of the main factors that creates an incentive for the prosperity of Homeland. Patriotism is formed in a concrete life environment, on a social basis and on the basis of existing spiritual and moral values. Both folk and Homeland must be independent in order for its full and correct formation to display high specimens.

4. Courage. If a person has all the qualities listed above, but there is no courage, then no one will benefit from these qualities. Because courage acts as a driving factor for all the positive social qualities of a person. As a result, the feeling of social activity in a person is more strengthened.

Social activity is proportional to social tolerance. Tolerance – this does not mean that the thoughts, views and actions of others are subjected in a non-effective, natural way. Perhaps it represents an active moral advantage and psychological readiness towards understanding, positive cooperation between individual people, different groups, peoples, social groups.

Tolerance serves as the basis for the prevention of destructive actions of young people in relation to other cultures as well as to other thinkers.

In order for the youth of society to be socially active and tolerant, it would be appropriate to ratify the existing international conventions on human rights in the Republic, along with the adoption of laws that ensure the implementation of youth policy, to create and introduce into the minds of all strata of our society and individual persons even more extensive opportunities.

It is necessary to formulate in a person the ability to perceive another person from childhood, in some way, with complexities in his thoughts, nature, culture, views. by absorbing such an idea to young people through education and training, it should mean that people are mutually equal, despite their lifestyle, culture, social origin, material self-esteem, etc.[8]

To be aware, not to remain indifferent to what is happening is the social activity of young people in the current period. This will revive the formation of such characteristics as the upbringing of young people in the spirit of kindness, justice, democracy, the formation of a sense of self – education and development in them, the need for social activity, the correct assessment of information on a wide and varied scale and the development of new areas of knowledge[9]. One of the tasks of modern education is the development of social activity and tolerance among young people.

## CONCLUSION

Some young people are faced with difficulties in the sense that they do not understand the opinion of others and do not want to understand. They can not even imagine that a person standing opposite them has his own way of thinking and acting. Often they try to transfer their opinion to others, in addition, they are illiterate in matters of tolerance. Formation of students' tolerance the use of the basic principles of cooperation between the teacher and the students in communication in the course of the lesson gives a good effect.
